Summary by Position

Position	Count	Avg LOC	Avg Classes	Avg MISRA CC	Avg Cyclomatic
dev	20	1490	54	4405	270
arch	28	2160	67	5816	326

LOC Distribution

Range	Participants
< 500	p2, p3, p5, p13, p14, p18, p21, p39
500–1000	p22, p23, p27, p35, p42, p43, p44, p47
1000–2000	p1, p7, p10, p11, p12, p19, p20, p25, p26, p28, p30, p32, p36, p37, p40, p41, p48
2000–3000	p4, p9, p15, p17, p31, p45
3000–5000	p6, p8, p16, p24, p29, p33, p34, p38

Complexity Highlights

Highest MISRA CC (Code Complexity)

Rank	Participant	MISRA CC
1	p29-arch-sn	20463
2	p33-arch-sn	20463
3	p46-arch-esp	16821
4	p16-dev-esp	15982
5	p6-dev-pl	14640

Highest Cyclomatic Complexity

Rank	Participant	Cyclomatic
1	p46-arch-esp	1636
2	p16-dev-esp	707
3	p29-arch-sn	680
4	p33-arch-sn	680

Rank	Participant	Cyclomatic
5	p8-dev-sn	595

Highest LCOM (Lack of Cohesion — lower is better)

Rank	Participant	Avg LCOM
1	p34-arch-sn	55.03
2	p20-dev-pl	23.77
3	p31-arch-sn	21.2
4	p38-arch-sn	12.35
5	p12-dev-pl	11.41

Metric Correlation Matrix

Pearson correlation across all 48 participants.

Cyclo	0.96	0.92	0.06	0.18	0.03	0.07	0.34	0.13	0.90	0.90	0.83	0.77	0.81	1.00

Strong correlations (|r| ≥ 0.85): CLC↔CC (0.99), CWC↔CC (0.99), CLC↔CWC (0.97), LOC↔Cyclo (0.96), MC↔CLC (0.94), MC↔CC (0.94), LOC↔MC (0.92), Classes↔Cyclo (0.92), MC↔CWC (0.92), AC↔Cyclo (0.90), MC↔Cyclo (0.90), Classes↔CLC (0.89), LOC↔Classes (0.89), Classes↔AC (0.88), Classes↔CC (0.88), Classes↔MC (0.86), LOC↔AC (0.86), Classes↔CWC (0.85)
Notable: WMC↔LCOM (0.75) — classes with more methods also tend to be less cohesive. CBO is negatively correlated with size metrics, suggesting smaller codebases use more coupling per class.

CK Metrics (per participant, averages/min/max per class)

Min values exclude zero (min > 0). DIT and NOC reflect only inheritance within the analysed codebase; external base classes (e.g. ControllerBase) are not counted.

MISRA Metrics (per participant)

MC and CC are at method level; AC, CLC, and CWC are at class level. Min values exclude zero (min > 0).

Participant	Position	Level	Total MC	Min MC	Max MC	Total AC	Min AC	Max AC	Total CLC	Min CLC	Max CLC	Total CWC	Min CWC	Max CWC	Total CC

Metric Definitions

Metric	Description
LOC	Effective lines of code (excludes comments and blank lines)
WMC	Weighted Methods per Class — method count per class
DIT	Depth of Inheritance Tree — levels of inheritance from root (external base classes not counted)
NOC	Number of Children — direct subclasses within the analysed codebase
CBO	Coupling Between Objects — number of coupled classes (lower = better)
RFC	Response For a Class — number of methods that can be executed
LCOM	Lack of Cohesion of Methods — lower = better cohesion
MC	Method Complexity — MISRA cognitive complexity at method level
AC	Accumulated Complexity — MISRA complexity accumulated at class level
CLC	Class-Level Complexity — sum of complexity within the class
CWC	Class Weighted Complexity — weighted complexity at class level
MISRA CC	Overall codebase cognitive complexity
Cyclomatic	Total cyclomatic complexity (1 + decision points per method, summed)

CSV Files

Each participant folder contains: - `metrics_loc.csv` — LOC at method, class, and file levels - `metrics_ck.csv` — CK metrics (WMC, DIT, NOC, CBO, RFC, LCOM) per class - `metrics_misra.csv` — MISRA metrics (MC, AC, CLC, CWC, CC) at method/class/codebase levels - `metrics_cyclomatic.csv` — Cyclomatic complexity at method, class, and file levels
